

Upcycle Center

The new Upcyclecentrum contributes to the circular economy in which raw materials are reused optimally

Almere will built in 2017 in new Upcyclecenter near to the Floriade, the World Horticultural Expo that will be held in 2022. The new Upcyclecentrum contributes to the circular economy in which raw materials are reused optimally. The Upcyclecentrum makes a positive contribution to the task of Almere in 2020 to be a waste-free and energy neutral city. The center looks like a shopping mall where you bring your waste, and then to obtain products designed and created from the waste. Old or discarded goods will have a new economic value. A value which in some cases may be higher than the original value. The construction of the Upcyclecentrum starts the first quarter of 2017.
