

The Hungarian National Association of Radio Distress-Signalling and

Communication for emergency

The Hungarian National Association of Radio Distress-Signalling and Infocommunications - RSOE (HUNGARY) operates Emergency and Disaster Information Service (EDIS) within the frame of its own website which has the objective to monitor and document all the events on the Earth which may cause disaster or emergency. The service is monitoring and processing several foreign organisation's data to get quick and certified information. The EDIS website operated together by the General-Directorate of National Disaster Management (OKF) and RSOE, in co-operation with the Crisis Management Centre of the Ministry of Foreign Affairs, provides useful information regarding emergency situations and their prevention. Extraordinary events happening in Hungary, Europe and other areas of the World are being monitored in 24 hours per day. All events processed by RSOE EDIS are displayed near real time - for the sake of international compatibility - according to the CAP protocol on a secure website.
