

World SkyCat Ltd. (UK), suppliers and operators of the new SkyCat family of air vehicles. Capable of landing virtually anywhere on land or water without need of ground infrastructure and carrying payloads ranging from 20 to 1,000 tons, the SkyCat hybrid air vehicles offer a uniquely flexible and cost-effective solution to a broad spectrum of market and mission requirements. Like all lighter-than-air vehicles, the payload capability of the SkyCat increases exponentially with size. Unlike airships, however, its aerodynamically-derived lift enables the SkyCat to gain significantly further from the benefits of scale.
