

Carpooling

Sharing car for a lesser impact on the environment

Carpooling (also known as car or ride-sharing, lift-sharing and covoiturage), is the sharing of car journeys so that more than one person travels in a car. By having more people using one vehicle, carpooling reduces each person's travel costs such as fuel costs, tolls, and the stress of driving. Carpooling is also seen as a more environmentally friendly and sustainable way to travel as sharing journeys reduces carbon emissions, traffic congestion on the roads, and the need for parking spaces. Authorities often encourage carpooling, especially during high pollution periods and high fuel prices. www.carpooling.co.uk is a car sharing platform to share a lift within the UK and Europe with 3,7 million registered users.
