

UOP LLC (USA), a Honeywell company, signed an agreement to license technology to Emerald Biofuels LLC to produce Honeywell Green Diesel at a facility in Louisiana. Emerald is expected to use Honeywell's UOP/Eni Ecofining process technology to produce 85 million gallons per year of Honeywell Green Diesel from non-edible, second-generation oils and animal fats. Honeywell Green Diesel is a drop-in replacement for traditional diesel. Chemically identical to petroleum-based diesel, Honeywell Green Diesel can be used in any proportion in existing fuel tanks without infrastructure changes.
