

Parkmobiles

Mobile containers give the opportunity to seat in the public places while having an easily deployable landscape

Parkmobiles were created to enliven street life in the evolving Yerba Buena District of San Francisco. Designed for economy and durability, Parkmobiles are rugged, custom-designed industrial containers that incorporate seating and landscape into easily deployable units. Six Parkmobiles, each with a different plant mix, were moved throughout the district's streets, creating new active public spaces. Parkmobiles was part of CMG Landscape Architecture's Yerba Buena Street Life Plan, a community-based public space plan with 36 intervention projects for the next generation of public space in the district.
