

The Uni

Mobile open-air reading rooms are installed everywhere in the city to contrast the limited access to learning resources

The Uni is a mobile, modular outdoor library designed to reinforce the potential for learning in the public sphere. Developed in Boston by Street Lab (now The Uni Project) in collaboration with HAAweler + Yoon Architecture, the Uni introduces an unfamiliar use of the public realm, converting any square or sidewalk into a plein-air learning lounge. Uni's lightweight modular structures are composed of open-faced stacking cubes, which can each hold 10 to 15 books, and can be adapted to almost any public space. The first was assembled in a street market in Lower Manhattan, and Unis have since been installed all over New York City, Boston, and recently, in Almaty, Kazakhstan, with book selections varying according to location and time.
