Basingstoke Community Energy Fund is raising finance from the local community and council to invest in local renewable energy projects. Together with its sister Co-op - Basingstoke Energy Co-operative they have already installed a 10kW community owned solar PV system. They are about to install a 100kW system on a local school and are talking with a local community centre to install solar PV and heat pump system. The local council has committed to meeting 20% of the town's energy needs from local renewable resources by 2020. It has set aside £1 million to fund the first round of projects.
