Launched in 2005 by French ecological and ethical business organizations, Enercoop is a 100% green energy supplier. Based on the cooperative model, Enercoop is able to gather among its members producers and consumers of green electricity as well as key partners; all willing to work together to promote renewable energy and rational energy use. One of the main objectives of Enercoop is to decentralize energy production so as to give every citizen the opportunity to get involved in the energy transition. By supporting the emergence of new local REScoops since 2009, Enercoop is fostering a network of cooperatives within which every citizen can invest and participate. Rooted in the movement of social and solidarity-based economics, Enercoop is also committed to ensure the financial transparency of its activities and to redistribute its financial profit into new RES projects. Enercoop is today the largest supplier of green electricity in France with 8000 members, 13000 clients and more than 50 producers of green energy.
