

THE SWEDISH SUSTAINABLE ECONOMY FOUNDATION

Economic policy approaches to drive sustainability

Established in 1995, the Foundation's purpose is to offer systemic approaches and solutions to the challenge of developing society in a sustainable way. The Foundation develops and supports the development of these solutions mainly in the areas of ecology, economy and work. The Foundation takes a non-political, holistic approach to promoting these solutions through research and development, education and spread of information. The Foundation recognizes that market forces represent a powerful, dynamic potential to change that could be harnessed to promote sustainable development.
