

EUREKA TRANSITIONAL EARTHSHIP COMMUNITY

Creating off-grid, self-sustained communities by eliminating dependency on money.

Our vision is to create completely self sustained communities, by eliminating dependency on money for food, shelter, power, and water; because no one should have to pay a cost just for living. We accomplish this through a resource-based economy by building off-grid homes with free, recycled materials; and growing organic food and fish with aquaponics farms. As we build off-grid homes and aquaponics for the community, we take the opportunity during each build to train others how to do this for themselves. Our mission is to teach sustainability to as many people as are willing to learn, so they in turn will teach it and spread it around the world.

BIOTECHTURE
Thrive! Not just survive.
