Carbon Co-op

Project author or developer: **Carbon Co-op**

Where:

GB / United Kingdom / Greater Manchester

Website: carbon.coop/

A co-operative of householders seeking to reduce their carbon emissions through domestic retrofit and renewable energy generation

Welcome to the Carbon Co-op.... We are a community benefit co-operative that promotes the development of carbon reduction measures. We make it simple, cheap and easy for households, streets and neighbourhoods to come together to retrofit their houses through the purchase of low-carbon and energy-saving equipment. Owned by its members any profits generated are re-invested back into the co-operative. The more people that join, the cheaper the products become.
