The Tiwai Island Project aims to generate sustainable income and to protect culture and biodiversity in the region surrounding the Tiwai Island Wildlife Sanctuary through a Health Village based on the principles of West African ethnomedicine; and an Ecotourism Centre. Building on existing conservation initiatives, the partnership aims to conserve this cultural and biodiversity by using it as a foundation for alternative, modern livelihoods for the surrounding communities. Near the Tiwai Island Wildlife Sanctuary, the partners intend to construct a Health Village, both employing local communities. The Village will offer tourists unique healing arts and health services based on Sierra Leonean ethnomedicine.
