

Barefoot Power

Manufacturing cheaper and more effective lightning solutions for people in developing countries

Barefoot Power is a Business that assists People in Developing countries to access affordable renewable energy. This will reduce poverty and create new markets.

Our focus on providing affordable lighting and phone charging products specifically for low income populations that do not have access to electricity. We believe that energy access is one of the key building blocks of economic development and the first step to alleviate energy poverty. Thus our first area of focus is on the most basic need for clean and affordable lighting.

To achieve this, we design, manufacture and distribute micro-solar lighting and phone charging products that have been designed to target communities in developing countries. Our mission is to help low income families break their dependence on inefficient, expensive and harmful light sources by giving them cleaner and cheaper options.
