

We grow materials made from agricultural byproducts and mushroom mycelium. Mycelium is a natural, self-assembling glue, digesting crop waste to produce cost-competitive and environmentally responsible materials that perform. We are committed to working with industry and consumers to rid the world of toxic, unsustainable materials. Ecovative is a material science company developing a new class of home-compostable bioplastics based on mycelium, a living organism. Mushroom Materials are high-performance, environmentally responsible alternatives to traditional plastic foam packaging, insulation, and other synthetic materials.
